- Optional: Meningococcal ACWY, Influenza vaccine during flu season (Oct-Feb)

## 12-15 Years

- Monitor growth and development
- School Physical
- Optional: Influenza vaccine during flu season (Oct-Feb)

#### 16 Years

- Monitor growth and development
- School Physical
- Optional: Influenza vaccine during flu season (Oct-Feb)

## 17-21 Years

- Monitor growth and development
- School Physical
- Optional: <u>Influenza vaccine during flu season (Oct-Feb)</u>

\*Beginning January 1st, 2020, existing patients/parents who continue to decline required vaccines despite all our efforts will be asked to find another healthcare provider due to our compassionate concern for all children. Although herd immunity may allow the impression of natural protection, please recognize that by not vaccinating you are putting your child and those around you, especially the most vulnerable, at unnecessary risk for life threatening illness, disability, and even death. Also, please be aware there are many web sites that contain misinformation about vaccines. We encourage you to consult legitimate, science-based sources such as the ones linked below.
